Software Engineer at GITS.ID building REST APIs, CMS platforms, and enterprise internal tools for FMCG and energy clients, including APIs used by Android/iOS apps. Next focus: backend engineering and system design.

Work Experience

GITS.ID – Bandung Apr 2026 – Present

Software Engineer

- **Pocari Run (PT Amerta Indah Otsuka):** maintain and develop an app for run tracking, running training, and Pocari Sweat Run events (~25,000 runners per year in Bandung and Lombok), plus its CMS, including spin wheel, redeem codes, and participant medical screening (health questionnaire, QR code, colour-coded risk category). The REST API is consumed by Android/iOS apps to scan QR codes and validate participant status.
- **PGN (PT Perusahaan Gas Negara):** maintain an enterprise-scale internal app for customer consumption estimate data. Added permission-based access control and moved Excel exports to a background queue, eliminating timeouts on large datasets.
- Built a POS application with Laravel and Filament: admin dashboard for account management, multi-store/outlet allocation, and role-based access control.
- Write unit tests and Playwright tests (functional, regression, E2E) plus technical and API documentation.
- Apply Scrum with an automated pipeline to improve output quality and make delivery time more efficient.

Firma Hukum Rantai Khatulistiwa – Jakarta Jul 2024 – Sep 2024

Full Stack Developer – Intern

- Built the company profile website and added online legal service features, including frontend integration.

Projects

Industrial IoT Asset Monitoring Dashboard – Bandung Apr 2026 – Jun 2026

- .NET 8 backend with Clean Architecture/DDD; sensor telemetry (temperature, pressure, vibration) ingested via MQTT (Mosquitto) and pushed live to the dashboard with SignalR.
- PostgreSQL storage, edge data simulation scripts, and the whole system containerized with Docker Compose.

TVP-SDD-CLI (npm package) – Bandung May 2026 – Jun 2026

- Node.js CLI that generates PRD, Technical Design, and QA Report documents from a single command, with no API key or external AI service. Splits PRDs into per-scenario tasks and scaffolds tests (Playwright, Jest, PHPUnit, xUnit, JUnit, pytest) based on the detected project type.
- Published as a public npm package with a CI pipeline.

Snipe-Code CLI (Rust) – Bandung Jun 2026 – Present

- Rust CLI that runs locally with no account or API key: multi-stack project scaffolding, codebase analysis, security audit, and verify (lint, typecheck, test, build) with exit codes usable in CI.
- Released on crates.io (v0.5.3) with 4-platform binaries verified by SHA-256 checksums and cosign, plus a GHCR container image. Listed as a contributor to XERJ Corpus Hub, a code-example library for AI coding agents.

Crazwash Service Management & POS Web Application – Bandung Dec 2025 – Feb 2026

- Fullstack system for orders, customers, and transactions of a small shoe-cleaning business: PostgreSQL schema, multi-step workflow, authenticated REST API, and admin dashboard.

Education

Telkom University – Bandung Sep 2021 – Aug 2025

- B.Sc. in Informatics, GPA 3.20/4.00
- Thesis: UI Design of a Web App for Learning Sundanese Script at SMAN 24 Bandung (User-Centered Design)

Skills

Backend: Laravel, Spring Boot, .NET 8, Node.js, REST API, JWT | **Frontend:** Next.js, React, Tailwind CSS, HTML, CSS
Database: PostgreSQL, MySQL | **Tools:** Git, Docker, Prisma ORM, Playwright, MQTT, SignalR, Vercel, Figma
Languages: PHP, JavaScript, C#, Java, Rust | **Practices:** Clean Architecture/DDD, RBAC, Unit/E2E Testing, Agile/Scrum, CI/CD

Organizations & Certifications

Organizations: External Division, PERMIB (2023–2024); Sponsorship Division, Perfect (2022–2023), Telkom University
Certifications: EPRT (Telkom University); Problem Solving (HackerRank); Foundations of Coding Full-Stack (Coursera)
