Software Engineer experienced in building and integrating backend APIs for CMS and POS systems, as well as supporting integration needs for mobile applications. Focused on writing well-documented code and improving development workflow efficiency through automation, with a strong interest in deepening expertise in backend and system design.

Education

Telkom University – **Bandung** Sept 2021 - Aug 2025

- Bachelor of Informatics, GPA: 3.20/4.00
- Final Project/Thesis: UI Design of a Website-Based Application for Learning Sundanese Script (Aksara Sunda) at SMAN 24 Bandung Using the User-Centered Design Method

Experience

Firma Hukum Rantai Khatulistiwa – **Jakarta** Jul 2024 - Sept 2024

Full Stack Developer – Intern

- Developed and customized the company profile website
- Added online legal services features
- Designed and integrated frontend components into the website
- Collaborated with the team to adapt features to requirements

GITS.ID – **Bandung** Apr 2026 - present

Software Engineer

- Worked in an Agile/Scrum environment using Taiga, applying a Spec-Driven Development (SDD) approach in every sprint cycle.
- Performed manual and automated software testing using Unit Testing and Playwright, covering functional, regression, and end-to-end testing to ensure feature quality before release.
- Created and maintained test cases and testing result documentation, technical feature documentation, and API documentation.
- Developed a POS (*Point of Sale*) application using Laravel and Filament, including building *admin dashboard* features for account management, store allocation (*multi-store/outlet*), and access rights control
- Maintained and developed a CMS application for FMCG, including a medical screening feature (health questionnaire, QR code generation, and color-coded risk categorization) for sports event participants, along with a backend REST API consumed by Android/iOS mobile apps to scan QR codes and validate participant status.
- Maintained and developed an internal application for managing enterprise-scale customer consumption estimate data, adding permission access control and converting Excel exports to a background queue to resolve timeouts on large datasets
- Developed and implemented automation in the development workflow to reduce manual work in the development and technical documentation process.

Projects

Final Project/Thesis – **Telkom University** Jan 2025 – Aug 2025

Title: UI Design of a Website-Based Application for Learning Sundanese Script (Aksara Sunda) at SMAN 24 Bandung Using the User-Centered Design Method

- Identified the challenges and learning barriers faced by high school students as the basis of the design process.
- Designed and developed a website-based learning application using *User-Centered Design* (UCD) principles
- Focused on improving *usability* and learning accessibility for the target users.

Service Management & POS Web Application - **Bandung** Dec 2025 – Feb 2026

- Developed a fullstack system to manage orders, customers, and transactions for a shoe-cleaning small business
- Designed the PostgreSQL database schema and a multi-step workflow
- Built a REST API with authentication and an admin dashboard

Financial Management System (Money Tracker) - **Bandung** Jan 2026 – Mar 2026

- Developed a fullstack application to manage accounts, transactions, and budgets
- Implemented JWT authentication and recurring transactions
- Built analytics features such as category breakdown and monthly trends
- Experimented with Docker for the backend and deployed to the cloud (Koyeb)

Industrial IoT Asset Monitoring Dashboard - **Bandung** Apr 2026 – Jun 2026

- Backend & Architecture: Built the backend with .NET 8 using a Clean Architecture / DDD structure to keep the code modular.
- Data & Real-time Stream: Integrated MQTT (Mosquitto) to handle sensor telemetry data (temperature, pressure, vibration) and SignalR for live data updates to the dashboard.
- Infrastructure: Created edge data simulation scripts, managed data storage in PostgreSQL, and containerized the entire system with Docker Compose.

TVP-SDD-CLI (Dev CLI Tool) - **Bandung** May 2026 – Jun 2026

- Built an automation *CLI tool* (status: *active beta & testing*) inspired by the OpenSpec concept to cut *manual effort* in creating technical documentation (PRD, *Technical Design*) down to the scenario level.
- Implemented folder structure automation as a standard to supply data context that can support work automation
- Provided automatic *task breakdown* from PRD documents and a *skill/workspace* template generator that can be used right away for work automation

Organizational Experience

External Division – **PERMIB – Telkom University** Sept 2023 – Jul 2024

- Built and managed relationships between student organizations
- Prepared meeting minutes and activity timelines

Sponsorship Division – **Perfect – Telkom University** Sept 2022 – Jul 2023

- Maintained relationships with sponsors
- Created presentation materials to pitch to sponsors

Skills

- Frontend: Next.js, React, Tailwind CSS, HTML, CSS
- Backend: Laravel, Spring Boot, .NET 8, Node.js, REST API, JWT
- Database: PostgreSQL, MySQL
- Tools: Git, Prisma ORM, Docker, Vercel, Figma, MQTT, SignalR

Certifications

- EPRT – Telkom University Language Center
- Problem Solving – Hacker Rank
- Foundations of Coding Full-Stack – Professional Microsoft Full-Stack Developer (Coursera)
